

# Fixed Casement Windows

You purchased a house and didn't lose your shirt on the deal, but the property came with projects that need to be completed to get it up to a standard that is acceptable. Siding needed to be replaced, a roof, and new driveway were projects that you assumed to make the house presentable from a visual perspective. Next, you tackled the appliances, the furnace and water heater and some savings started to build as did some equity with all the upgrades, but the next big thing is the scariest, and that is new windows. But it doesn't have to be, updating the windows is the best home renovation project that a homeowner can assume because it has the highest rate of return in two areas. First, new energy efficient windows will prevent unnecessary energy use and second new windows will provide a boost to the equity in your home should you sell because it eliminates a project from the to-do list of the purchase and makes the home move-in ready.

When you are ready to meet the challenges of the project call us at **Blake Exteriors** for all the help you need outfitting your home with new windows. Our consultants are well trained and extremely astute when it comes to analyzing your needs and providing windows solutions to fit the criteria of specific windows for specific uses.

When we sit down with you to discuss your needs, we will advise you that we use one of the top suppliers for windows and doors in the country and that is Stage Windows and Doors. They have a wealth of experience providing the best products that the industry can offer and they are a Canadian company that sets the pace among the competition.

## Fixed Casement Windows

When you are retrofitting your home with new windows, one product that will be a staple of any upgrade is fixed casement windows. A fixed casement window is exactly what its' name says, it is a window that doesn't open, unlike its' cousin, casement windows. It was designed to provide a great view of the outdoors and permit a great deal of natural light to enter the room it is installed. It is a high energy efficient window – it doesn't let the elements in and doesn't let heat or cool air out. A fixed window is a complimentary window when we think of a window retrofit for your home and placed in areas that require no ventilation but that need light to shine in. While it may be a 'basic' window, it can be modified to project design features that will dress it up to match the décor of your home.

## Stage fixed casement windows, low profile

The Prima Vinyl Series of fixed casement windows by Stage Windows are extremely popular among homeowners looking to update their home's windows. It meets or exceeds Energy Star and NAFS-11 standards and because it doesn't open, it is one of the best energy-efficient windows on the market today. What the low profile casement window was designed to do is maximize the glass area of the window. With no operating sash, the glass area has been reduced, and with the reduction comes cost savings as there are no moving parts and the glass requirements are smaller in need.

The window comes in the standard white colour, but for homeowners who want a little zest in their home's profile, the window can be customized for the colour of choice for the homeowner.

In the Prima Series for low profile fixed casement windows, Stage has a few extras to provide a homeowner who wants to upgrade their purchase. Great energy efficiency made of vinyl, optional colours, and 'let the sunshine in.'

## Stage fixed casement windows, high profile

The Prima Series of fixed casement windows, high profile, was created to work with the low-profile windows and it is a complimentary piece to provide cohesion in your home's new windows design. As a window that doesn't open, it continues to shine on Energy Star and NAFS-11 testing for energy efficiency and that is important when thinking of return on investment. The standard colour, like all Stage windows, is white, but colour changes are available when you purchase this window. The window has a larger sash inserted in it to provide a great radius for the sun to shine through and it a superior product when compared with other windows in its' class.

The Prima Series of fixed casement windows, high profile, is a great addition to your home. Generally, it is paired with the Prima Series windows that create symmetry for your home's windows design. Again, it comes in a standard white and can be made in any colour a homeowner would like when addressing a colour scheme. Like all windows in the Prima Series, it comes with double 7/8" or triple 1-3/8" glazing.

Apart from the fact, the non-opening fixed casement window is great for energy efficiency; it provides an added benefit that windows that open don't, enhanced security. Intruders can't breach a window that doesn't open unless it is broken; this feature is also beneficial when you take into account that it keeps bugs out too. It is uncommon for thieves to break a fixed casement window because the size – generally larger, or picture window – and that is an excellent deterrent.

With no opening, the fixed casement window is the highest rated energy efficient window on the market, but you may want to add some extras to get the most out of the window. Double or triple glazed windows that are gas-filled offer higher energy efficiency as does low emissive coatings that help increase the energy efficiency. The larger size of the fixed casement windows provides greater access to natural light and improves the 'mood' of any room it is installed. A fixed casement window is very versatile and works well with other windows in the design aspect of the upgrade you engage in. The best benefit is reduced costs of the fixed casement window, it has no moving parts and single or double-glazed is cheaper to produce without compromising quality or energy efficiency.

At **Blake Exteriors**, we want to put the sunshine in your life with new, fixed casement windows and we invite you to contact us to book a personal interview for a home-changing upgrade. Call us today for a free estimate and no-obligation meeting at 519.852.7887.

# Casement Windows

Features "Roto" German  
Hardware technology

When you decide to make the switch to new, energy-efficient windows you have many options to choose from and depending on the application for the window, you can make an informed choice. Generally, when you purchase new windows, you seek the good counsel from a windows and doors consultant like us at **Blake Exteriors**. We work with Stage Windows and Doors and they supply all our products for installation – and we work with Stage Windows and Doors and they supply all the windows and doors we install in the homes we work on. For the ultimate process control, Stage Windows and Doors has equipped their manufacturing facility with all the key component fabrication processes needed to make the most energy-efficient and reliable windows on the market. With everything under one roof—from the insulated glass unit fabrication to PVC profile bending to painting—all quality and service levels can be managed seamlessly and proficiently and supplying quality products at a fair price.

Before we can extol the virtues of a particular window, we need to tell you about the window, why it may be a good fit for your home, and what the advantages are for a specific window. Remember too, that you can install

different windows in different places in your home for decorative effect or a specific application that will meet the needs of your home.

## Casement Windows

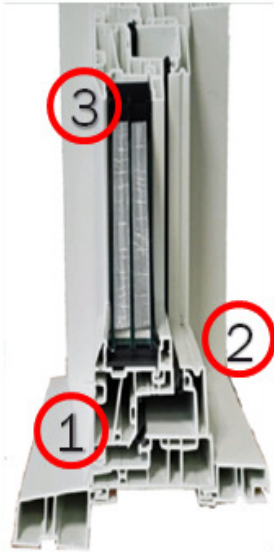

A casement window is attached to the frame with one or more hinges and they are hinged at the side of the window and the hinge is attached to the frame. The construction of the window can be a single or a double window inside a common frame and they are hinged on the outside.

Casement windows open with a casement stay, if the window is hinged at the top of the window it is called an awning window and if the window is hinged at the bottom it is called a hopper. The window opens with a "Roto" crank mechanism, Heavy duty hardware options with corner drive and 150lbs rated hinges a lever or a handle that is positioned at the bottom of the window that makes it easier to access to turn to open the window. If the window opens out, it will be equipped with a crank, stay or friction hinge to keep the window steady in the wind. The glass in the frame is secured in a rabbeted frame and sealed with putty around the edges to provide an airtight seal in the compartment. In general, casement windows are rated as the lowest air leakage window on the market because they seal shut by pressing against the frame in comparison with sliding windows.

## Stage casement windows

When we engage you for the initial consultation for the casement windows you want to purchase, we would like to make you aware of the fact that Stage has what we consider to be the #1 Casement being offered in the Canadian market today, so we request you to review before you make a decision.

Stage Prima Casement Series Standard offers is as follows.

- Slimmer frame and thicker walls
- True multi-chamber design with extra rigidity walls including diagonal sash brace (1)
- Heavy duty screen bar with dedicated screen groove, spring loaded no pins! (2)
- Heavy duty hardware options with corner drive and 150lbs rated hinges
- 5 hardware colour selection with standard lock out handle
- Standard foam filled sash and frame
- Standard Energy Star, passive solar gain Lowe/Argon fill
- Ideal glazing options with 7/8" for dual and 1"3/8 for triple panes (3)
- Hidden drain holes.
- Available in large sizes; achieved top rating test results with no heavy duty hardware package @ 34 x 74 in tripe glazing.

Set in a vinyl frame, the casement windows are in a standard 3-1/4" vinyl frame and they come with double glazed or triple glazed glass. The windows have been tested against NAFS-11 Standards as well as against Energy Star standards and they met or exceeded quality standards for both metrics.

There are many advantages that come with casement windows and a few of the benefits that are part of the windows are many. A casement window opens the widest of all windows. Another benefit of casement windows is they fact that can be opened on an angle and catch the breeze as it blows allowing or extra ventilation in the area that you have installed casement windows in. Casement windows provide an excellent security feature that isn't common with other windows. Because the casement locks are hooked-

shaped, they are difficult to pry open and that protects your home in a way you never imagined.

For a no-obligation consultation that comes with a free estimate call us at Blake Exteriors today at 519.852.7887 and upgrade your windows with the best product available.

## Awning Windows

You have just purchased a home and you have a few home renovation projects to complete before you get your new place up to the standard you envisioned it when you purchased it. Sure the roof needs to be dealt with as do the appliances and an upgraded furnace come to mind as places to invest your money, but the draughts from the windows is more than you can bear.

To get an idea of the type of windows you want to install in your home, you look at what the neighbors have, or maybe look on-line or peruse inventory at the local hardware store, but you just aren't getting a feel for a product that you might want to see installed at your home.

At this point, you need the services of experts in the field of windows and doors, and our company, **Blake Exteriors** is here to help. Our windows and doors experts have years of experience advising customers with regard to best windows to serve their needs and we have created many happy endings for those buyers who have chosen our services to help when they need to make decisions.

There are many different windows available and each serves a specific need and it is important to know what your needs are before you make a purchase. But, your home may encounter different situations where different windows will need to be installed to fill the void.

One windows style that is popular and fills many needs are awning windows, that we can we install for you from our supplier, Stage Windows and Doors. Stage is a Canadian company that has many years as a top-drawer windows and doors manufacturer and they hold many designations for quality and construction of their windows and doors products.

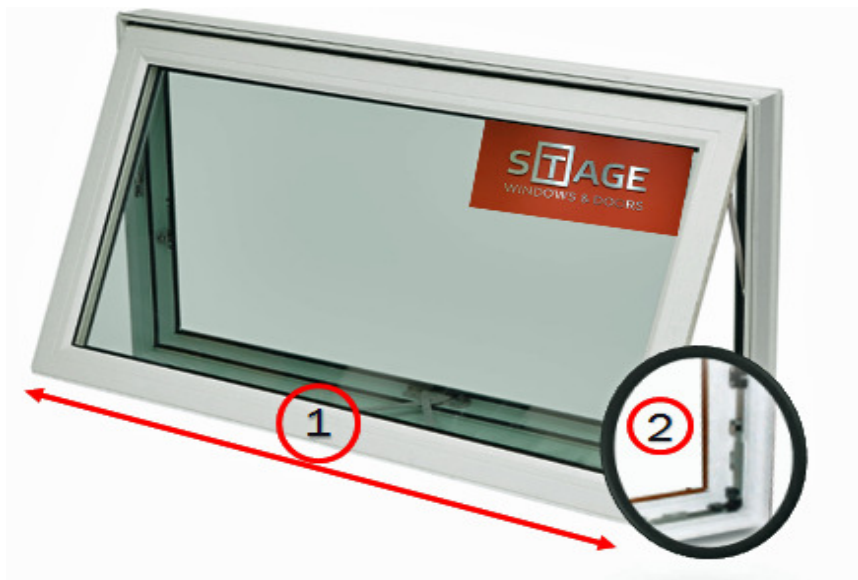

## What are awning windows?

Traditionally, awning windows are an 'outside' window, meaning they are installed in conjunction with other windows and they open out. The hinges for the window are on the top of the frame and the window opens from the bottom. This allows the windows to catch a breeze and channel it to the desired location and it can be open when it rains for ventilation without water leaking in. Awning windows are considered a privacy window and are generally installed on walls that are higher up than other types of windows and they are easy to open and close.

## Stage awning windows

Our supplier, Stage Windows and Doors carries the awning windows for a homeowner to choose from with benefits that are evident. The Stage Prima Series of awning windows is energy-efficient – it has surpassed the strict metrics of the Energy Star and NAFS-11 regimes. The windows are made of vinyl and come in white as a standard colour, but you can choose from a variety of custom colours to match your home's décor.

Stage Prima Casement Series Standard offers is as follows.

- Slimmer frame and thicker walls
- True multi-chamber design with extra rigidity walls including diagonal sash brace; max size up to 72". (1)
- Heavy duty screen bar with dedicated screen groove, spring loaded, no pins!
- Heavy duty hardware options with tie bars and two corner drives! (2)
- 5 hardware colour selection with standard lock out handle.
- Hidden drain holes.
- Foam filled sash and frame
- Standard Energy Star, passive solar gain Lowe/Argon fill
- Ideal glazing options with 7/8" for dual and 1"3/8 for triple panes

In the Stage Prima Series, the awning windows come in double or triple glazed options. Similar to casement windows, awning windows open with a scissor hinge to open from the bottom. The crank mechanism allows the windows to close tightly to the sash and they are more energy-efficient than slider-style windows for heat leakage. When you consider the options available for the Prima Series awning windows, you can maximize your energy savings through an "R" value of 3.84. The awnings windows in the Prima Series are practical for residential or commercial applications and are easily installed for a minimal inconvenience.

Awning windows come with some distinct advantages for a homeowner that can't be discounted when you are purchasing new windows for your home. The first advantage is weatherproofing, as mentioned previously. They keep rain water out when open because they open from the top and can direct airflow, increasing ventilation.

Typically, awning windows are smaller in size than most windows and they can be a great insurer of privacy for your home. Stage offers larger standard sizes due to the use heavy duty Roto Hardware and two corner drives in the corners. Installed higher on a wall, they don't compromise privacy or safety while providing a great deal of natural light and air- flow. Awning windows make for great additions in bedrooms, bathrooms or kitchens, positioned over sinks or counters in the kitchen for airflow and privacy.

Awning windows offer a design flexibility that other windows don't, they can be installed higher up on walls, and they can be aligned in interesting patterns that improve the public face that your home exhibits with the design and installation of awning windows.

When the time has come for an update for your home's windows, make the right move and contact us at **Blake Exteriors**. For a free consultation and free estimate from one of our windows and doors consultants, call us today at 1.519.852.7887.

## Double Hung Windows

You've been in your home for a few years now, the kids are growing, you have had no major catastrophes to interrupt your delicate balance and life is

good. When you first took possession of your new home, you knew you needed to upgrade some things and that was first on the list to make you house a home. A new, energy-efficient, furnace and a water heater that offered savings and they were first on the list. Next came the smart appliances that you purchased to save energy and they have lived up to the billing of better energy use and meant less energy use and that is the best part of the situation. The upgrades you made produced small returns based on the investment and now you are looking for a big investment that will pay off in spades and reduce your concerns for the environment and energy use.

The payoff you are looking for comes with replacement windows, they will create energy savings through a reduction in use, and by extension, it will reduce the costs of energy. An intangible benefit of new windows will be in the quality of life you enjoy due to the improvement environment that you are living in.

To make an investment in your home that comes with excellent benefits, contact us at AM Window & Door Solutions to make the jump to energy efficiency. We have a team of consultants at the ready to dispense with good advice and counsel when you are choosing your new replacement windows based on need and application. We work with Stage Windows and Doors and they supply all the windows and doors we install in the homes we work on. For the ultimate process control, Stage Windows and Doors has equipped their manufacturing facility with all the key component fabrication processes needed to make the most energy-efficient and reliable windows on the market. With everything under one roof—from the insulated glass unit fabrication to PVC profile bending to painting—all quality and service levels can be managed seamlessly and proficiently.

### **Double hung windows**

Double hung windows have two movable sashes (panels) that are adjustable and they capable of tilting inwardly. Double hung windows provide more ventilation – depending on which panel is open and how much it is open. Double hung windows are best suited for a variable climate – like Canada – and their versatility makes them an instant hit with homeowners. Double hung windows come in most standards sizes, but they are a bit more intricate to install and are best installed by a professional. The installation and manufacturing costs are higher, but they are an easy clean because the windows tilt open. For the past 20-30 years, double hung windows have been the default choice for new construction based on their energy efficiency and durability.

### **Stage double hung windows**

The Prima Series of double hung windows by Stage are energy efficient in their class and has great Energy Star and NAFS-11 ratings for energy efficiency. The standard issue for this model of windows is white, but there are designer colours for a homeowner who has taste and style and who wants it to reflect in their outer home décor. The Prima Series is beautifully designed and it is extremely functional. It is a simple job to clean as both the top and the bottom sash tilt in and ventilation can be had from either top or bottom sash. Some of the many added features that the double hung windows boast are heavy-duty cam lock and keeper, constant force balancers, finger latches, dual-interlocking rails, foam fill frame/sash, night latches, hidden drainage flaps, and a Heavy duty push down screen frame.

- True multi-chamber design with extra rigidity walls; approx. 30% more vinyl than typical windows. (1)
- Max sizes up to 50" x 78"
- Two hidden drain holes and two diagonally mounted drain flaps for less air infiltration; both located far from base for easy caulking and less chances of drain blockage.(2)
- Triple weather-stripping air tight system (3)
- Double tower glazing walls. (4)
- Curve shaped integrated pull rails (5)
- Inside frame mullion bracket easy to maintain.
- Heavy duty screen bars, spring loaded, no pins!
- Constant force balances.
- Cam and self-closing lock options
- Foam filled sash and frame
- Ideal glazing options with 7/8" for dual and 1"1/4 for triple panes (true triple pane, only large manufacturer to offer it)

## Key advantages for double hung windows

**Versatility:** very compatible with most homes and are the most popular for new construction and replacement windows, they come in a variety of shapes and sizes and be custom made to fit any opening in your home, and the best part, they are made of vinyl and it will stand up to most weather events in Canada.

**Air conditioner and screen friendly:** the difference between casement window and double hung windows is double hung windows are capable of accepting an air conditioner installed in it, while casement windows will not. The way the double hung window works – sliding up or down – instead of cranking out or side-to-side, they can accept an AC unit and screens can be installed or removed when necessary.

**Easy cleaning:** because the windows open in, the tilting allows the windows to be cleaned easily and quickly without too much trouble.

**Energy efficiency:** to maximize the return on energy efficiency, precise measurements must be taken to prevent air leakage or moisture leakage. Double hung windows can have quadruple weather stripping installed and if you choose this option you can expect to set your thermostat and forget it because the extra weather stripping has eliminated heat loss or cold air invasion.

To get to the next phase of energy efficiency in your home call us today at **Blake Exteriors** for a free estimate and consultation that comes with no-obligation, at 519.852.7887.

## Single Hung Windows

How you present your home to the neighborhood says a lot about you as a person and how you view yourself in a bigger context. We keep the grass cut, the snow shoveled, and the leaves raked, but the appearance of home might need a facelift that a little paint or siding won't satisfy.

But what is the criterion for a home makeover that won't break the bank, improve the overall look of your home and hopefully, save you some money over time?

The short answer and the only answer, in this case, is new windows. It starts will eliminating draughts or heat leakage inside your home, improves the overall look of your home and it is an energy-efficient project that has the advantage of returning money back to over time through savings on energy costs. Studies have told us time and again about the virtues of new windows – up to 40 per cent of a home's energy costs can be attributed to poor

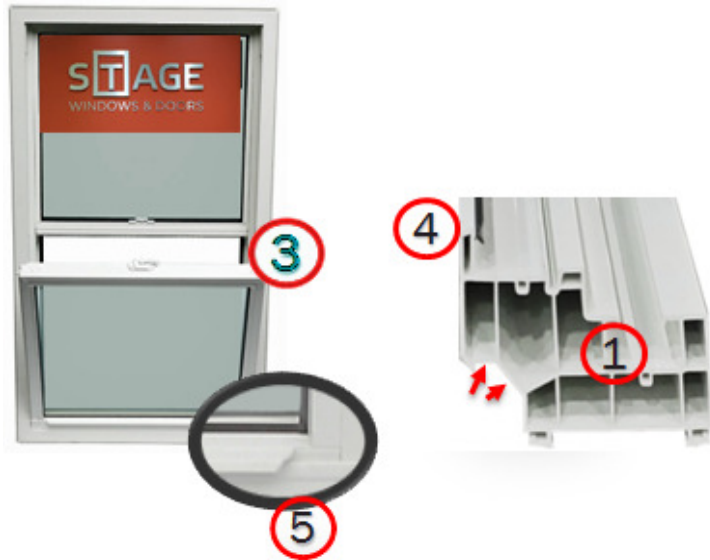

windows that allow heat to escape in the winter and heat to penetrate a home in summer.

Certainly, there are some front-end costs associated with new windows but those costs can be recovered over time through the money saved on reduced energy costs. For a homeowner who knows when it is time to replace the old windows with new, energy-efficient windows, they contact our company and we are AM Window & Door Solutions. We can help you decide what windows will be the right fit for your home and our consultants have a wealth of experience and advice for any homeowner. We work exclusively with Stage Windows and Doors and they supply the best products available for replacement windows and doors. Stage is a Canadian company that has a great deal of experience in the industry and their products are highly sought after in the windows and doors market.

## Single hung windows

Like the name says, single hung windows have one movable panel (sash). The single hung window provides ventilation control through the opening of the window only and the opening is at the bottom of the window and the sash. A single hung window is the easiest of the windows family of windows to install, as it is lightweight and has few moving parts. With few moving parts and less glass, the single hung window is probably the most economical of replacement windows – costs approximately 10-25 per cent less for purchase and installation – and maintenance costs are reduced also. The single hung window was extremely popular for installation in the past, due to the costs and easy installation and is still favored today for homeowners on a budget.

Stage single hung windows

- True multi-chamber design with extra rigidity walls; approx. 30% more vinyl than typical windows. (1)
- Max sizes up to 50" x 78"
- Two hidden drain holes and two diagonally mounted drain flaps for less air infiltration; both located far from base for easy caulking and less chances of drain blockage.(2)
- Triple weather-stripping air tight system (3)
- Double tower glazing walls. (4)
- Curve shaped integrated pull rails (5)
- Inside frame mullion bracket easy to maintain.
- Heavy duty screen bars, spring loaded, no pins!
- Constant force balances.
- Cam and self-closing lock options
- Foam filled sash and frame
- Ideal glazing options with 7/8" for dual and 1"1/4 for triple panes (true triple pane, only large manufacturer to offer it)

Stage produces one style of single hung windows and the model is the Prima Series of windows. Like all the windows they produce, the Prima Series of single hung windows is highly rated by Energy Star and NAFS-11 for energy efficiency. Single hung windows feature a fixed upper sash with a lower sash that is operable and it is able to tilt into a room for easy cleaning. Part of the attraction of the single hung window is it can be modified with a design accent like a rounded top window to set off the single hung window in a way that other windows products can't. The single hung windows are made of vinyl and come in a standard white colour. But, you can customize your colour scheme and Stage has many different colours to choose from.

While it has been said that single hung windows are the entry-level windows of choice for many homeowner they do come with benefits that are attractive to any homeowner. The first thing you will notice about single hung windows is the price. It is less than any other windows in its' category and because it has few moving parts and the costs are prohibitively less by comparison to other windows. As a basic window, single hung windows come with many options for finish, shape, trim and style. Single hung windows can be a great option for a homeowner or a business because they have a stately elegance that has all the modern features of any windows in its' class.

Making prudent financial decisions is what single hung windows are all about – they look great, save money through reduced energy use and allow for great airflow and natural light to spill into any room they are installed in.

When the time has come for replacement windows, let your taste make the choice and install single hung windows.

Call us today at **Blake Exteriors** for a no-obligation consultation and free estimate at 519.852.7887 to improve the quality of your life through a better environment.

## Single Tilt Slider Windows

Any homeowner has one job, to make a house a home and that can happen in many ways. It might start with the injection of a family into the situation, or be putting up pictures that reflect upon memories of the past that remind the residents of happy times. Or it might require upgrades and updates to the home's infrastructure that will bring the home up to a modern standard

with new technology that will protect the residents from the elements. Things like a new furnace or water heater are top of mind money savers that reduce energy consumption and work more efficiently. But those upgrades are the economy of scale and represent conservation, but there are bigger payoffs to be had through investments that will provide a return on investment that will pay off long into the future. New or replacement windows are the kind of projects that can generate a high rate of return on the investment. Make no mistake, windows come with a price, and for a homeowner, a sound investment in new windows might be scary at first, but once the details are fleshed out it can be the best investment you can make in your home.

At **Blake Exteriors** we want to help every homeowner we encounter and educate them about the virtues and benefits of replacement windows. Our consultants are very knowledgeable and they can advise a homeowner what the best window is for the application it has been chosen for. We work with Stage Windows and Doors, a Canadian company that supplies some of the best windows and doors products in the industry. For the ultimate process control, Stage Windows and Doors has equipped their manufacturing facility with all the key component fabrication processes needed to make the most energy-efficient and reliable windows on the market. With everything under one roof—from the insulated glass unit fabrication to PVC profile bending to painting—all quality and service levels can be managed seamlessly and proficiently.

### **Single tilt slider windows**

Historically, single tilt slider windows have been manufactured for smaller rooms and spaces where they are installed. The simplicity of the window is its main feature and it is simple to use and creates a friendly environment in any room it installed in.

Single tilt slider windows are made up of a single pane of glass that slides horizontally and it tilts open like a door. The single fitted sash can sustain a screen insert that allows for a better view of the outside that is unobstructed.

### **Stage single tilt slider windows**

In the Stage collection of windows comes the single tilt slider windows in the Prima Series. As with all Stage windows products they score high on the NAFS-11 and Energy Star ratings for energy efficiency and reduced heat and moisture leakage. They are great for eliminating condensation and hold their look for a long time. Made of vinyl, these windows stand up to the elements

very well and the outer exterior is virtually bulletproof when it comes time to meet the weather events that Ontario is known for. The single tilt slider windows have one moveable sash and one fixed sash glazed from the inside as it is constructed and its simple design allows for maximum return in its' applications. The single tilt slider window is considered a complementary window when dealing with a home's design – it isn't your showcase window – but it provides great ventilation and plenty of natural light in any room it is installed in. The window comes in the standard white but can be customized to fit the outside design of a home and the colour palette for the window is wide ranging. Many times this window is installed in the basement to provide security – small windows make for poor entranceways – and it improves the overall image that a home portrays when the window is installed.

Single tilt slider windows offer many benefits, and they have become a favorite for new home construction and replacements in homes that are undergoing a windows upgrade.

Stage Prima Single Slider Series Standard offers is as follows.

- True multi-chamber design with extra rigidity walls; approx. 30% more vinyl than typical windows.
- Max sizes up to 78" x 48"
- Two hidden drain holes and two diagonally mounted drain flaps for less air infiltration; both located far from base for easy caulking and less chances of blockage.
- Triple weather-stripping air tight system
- Double tower glazing walls.
- Curve shaped integrated pull rails
- Inside frame mullion bracket easy to maintain.
- Heavy duty screen bars, spring loaded, no pins!
- Cam and self closing lock options
- Standard foam filled sash and frame
- Recessed double metal brass rollers
- Proprietary sliding shoes design for enhanced sash grip. Standard Energy Star, passive solar gain Lowe/Argon fill

- Ideal glazing options with 7/8" for dual and 1"1/4 for triple panes (true triple pane, only large manufacturer to offer it)

Simple construction makes the windows easy to use, as does the easy installation of the window – and the look of the window once installed provides the kind of curb appeal that isn't present with some windows you can purchase.

A basic design allows single tilt slider windows to have modifications installed in conjunction with the windows makes them a must-have in any home or business. Features like sash locks for security, night latches and screens that are removable are part of the incentives that draw consumers to this particular style of windows.

One of the great benefits of the single slider tilt window is in its utility, because the window tilts in it is an easy window to clean from the inside of the home making it easier for a homeowner to deal with dirty windows.

Fresh air is another byproduct of single tilt slider windows and it is one of the many facts that make it a necessary item for a homeowner's property. Opening a window and letting in air to relieve the stuffy feeling a room can develop will provide a great respite from the 'closed-in' feel that room has with a window that doesn't open to the same capacity as a single slider tilt window.

Other Styles available:

### **Triple Sliders (End Vent)**

- Same frame design as sliders, available with tilt-in or lift out sashes
- True multi-chamber design with extra rigidity walls; approx. 30% more vinyl than typical windows.
- Max sizes up to 110" x 48"

- Two hidden drain holes and two diagonally mounted drain flaps for less air infiltration; both located far from base for easy caulking and less chances of blockage.
- Triple weather-stripping air tight system
- Double tower glazing walls.
- Curve shaped integrated pull rails
- Inside frame mullion bracket easy to maintain.
- Heavy duty screen bars, spring loaded, no pins!
- Cam and self closing lock options
- Recessed double metal brass rollers
- Standard foam filled sash and frame
- Proprietary sliding shoes design for enhanced sash grip.
- Ideal glazing options with 7/8" for dual and 1"1/4 for triple panes (true triple pane, only large manufacturer to offer it)

## **FIX AND SPECIALTY WINDOWS**

### **Hopper Window**

- Standard Double-glazed 7/8" LowE/Argon fill
- Hinge-free pivot shoe design ensures smooth operation.

Variety of linear and curved shapes custom built in regular and irregular form (template might be required)

Hot air bending with foam filled profiles. (1)

When you have made a decision to upgrade your home windows – whether in stages or all at once – know that we at **Blake Exteriors** are here to help make the decisions easy ones. For a no cost review of your current windows and doors that comes with a free estimate call us today at 519.852.7887.

## **Double Tilt Slider Windows**

You bought a home, and when you did it appeared that you might not need to put any money into for a few years and that was a good thing because the down payment tapped out your reserves. Now, with time gone by, you are looking at your home and see some necessary upgrades and updates that need to be made to keep your home in good condition. Many of the projects require some paint and elbow grease, but there a bigger projects that will have a large financial impact if they are taken up. New or replacement windows are a project that has appeal – both for the curb appeal that new windows will create, but also the energy efficiency that new windows will provide a homeowner. The returns will be felt down the line with a reduction in energy use and conversely, the financial returns will be eclipse the original investment. You only make the investment once, but the returns on reduced costs pile up over years and eventually, the initial investment is paid for through savings.

At **Blake Exteriors**, we have been providing good counsel for any homeowner who is interested in updating their home’s windows. Our team of consultants has the experience and knowledge it takes to help a homeowner choose the right windows for the right application.

When we help you choose windows for your home’s retrofit, we recommend the only choice for replacement windows and they come from Stage Windows and Doors. Stage Windows and Doors has equipped their manufacturing facility with all the key component fabrication processes needed to make the most energy-efficient and reliable windows on the market. With everything under one roof— from the insulated glass unit fabrication to PVC profile bending to painting—all quality and service levels can be managed seamlessly and proficiently.

## **Double tilt slider windows**

Double tilt slider windows share all the same traits as their single tilt slider windows, but they come with a higher degree of flexibility. In fact, the window comes with two ways to use it increases the versatility of the window in the use of the window. You can move either side to different degrees of openings to give you different looks to the window set-up and the amount of ventilation and the direction you want to send it in is the best thing about the window.

Stage Prima Single Slider Series Standard offers is as follows.

- True multi-chamber design with extra rigidity walls; approx. 30% more vinyl than typical windows.
- Max sizes up to 78" x 48"
- Two hidden drain holes and two diagonally mounted drain flaps for less air infiltration; both located far from base for easy caulking and less chances of blockage.
- Triple weather-stripping air tight system
- Double tower glazing walls.
- Curve shaped integrated pull rails
- Inside frame mullion bracket easy to maintain.
- Heavy duty screen bars, spring loaded, no pins!
- Cam and self closing lock options
- Standard foam filled sash and frame
- Recessed double metal brass rollers
- Proprietary sliding shoes design for enhanced sash grip. Standard Energy Star, passive solar gain Lowe/Argon fill
- Ideal glazing options with 7/8" for dual and 1"1/4 for triple panes (true triple pane, only large manufacturer to offer it)

Another thing about the double tilt slider window is it eliminates condensation – separating the hot and cold air and keeping it from interacting is a trait that comes to the fore when you discuss double tilt slider windows and that in itself is probably the single biggest factor that draws people to purchase this window.

## Stage double tilt slider windows

As with many of the products from Stage Windows and Doors, the Prima Series sees the double tilt slider window as the product of choice for many homeowners. The mantra of ventilation and easy to clean window comes to mind when you think about the Stage double tilt slider windows.

The double tilt slider windows come with many extra features and they can't be discounted when you take into account the application of that the window is satisfying or the location in which it will be installed. The first thing to

mention is that the window has double sashes that tilt in for easy cleaning. A heavy-duty cam lock/keeper and finger locks help with security, dual-interlocking rails, fly-maze and drainage flaps are part of the extraordinary window as well as overlapping screen frame and night latches all add to the window's superior performance when installed in a home. The window is issued in the standard white colour, made of vinyl, it can be customized at to match the design ideas of the consumer and is quite an accent for your home. Excellent Energy Star and NAFS-11 energy efficiency ratings are the best part of this cosmetically beautiful window and that means money back in any homeowner's pocket.

There are major benefits that can be enjoyed when you install double tilt slider windows. Cleaning comes to mind first and foremost because the sashes tilt in. A financial benefit can be derived when you install double tilt slider windows through energy efficiency. They protect against air and moisture infiltration and because they were designed to be energy efficient they are superior to any windows made in the last 10 years. This will drastically reduce your heating and cooling costs over time and that is money well saved.

An uncommon benefit of double tilt slider windows comes in the form of cooling, the windows can support the installation of an air conditioning unit that can be easily installed and removed as required for a homeowner's comfort.

Double tilt slider windows move up and down – so ventilation is the byproduct – but don't forget you will need to install a screen to keep the bugs out and the air moving in for maximum comfort.

The double tilt slider window is probably the most popular window on the market because it has a great deal of versatility in usage. The window can be manufactured in many different styles, sizes, and colours and makes for a great conversation piece in any room it is installed in.

To upgrade your home with a stylish window that has the character that represents values are a property owner, call us at **Blake Exteriors** to see how a Stage double tilt slider window can freshen up your home's look and produce energy efficiency. For a no-cost consultation that comes with a free estimate, call us today at 519.852.7887

## **Bay windows**

You bought a home and you know it needed some upgrades and updates to get it to the point where it was a reflection of your individuality and it made a statement about you as the owner. Fresh outdoor exterior updates like landscaping, a new driveway, replacement eaves troughs and new accents for the personal touch all spoke to the initiatives you had envisioned when you bought your house. But there are other upgrades that need to be made that will present your home as a stately estate, and in the context of the upgrade, it could be a financial windfall for you as a homeowner. When you look at the house, you see your windows look 'tired' and they don't compliment the upgrades you have made to modernize the exterior of the home.

The first thing any homeowner does when they hear replacement windows is to recoil in shock due to the upfront costs of replacement windows. But don't let the price scare you, the costs of the replacement windows will be returned to you over time through savings in energy consumption. The costs of less than energy efficient windows – windows made 10 years ago or more – is staggering when you get right down to the costs associated with windows that have little or no energy efficiency associated with them.

At Blake Exteriors, we have demonstrated to many homeowners the advantages of energy efficient windows and how the costs can be recovered through reduced heating and cooling bills.

We work with Stage Windows and Doors, a Canadian company with decades of experience manufacturing quality replacement windows for every application, and their windows speak for themselves.

## **Bay windows**

When you install a bay window in your home you are making a statement that says you are confident, strong and you feel that your home is the most

beautiful on the block. A bay window sits in the middle of the main wall of the front of your home and it receives a great deal of natural light that it beams into your living room. In the past, bay windows have been a rounded sectional window – almost crescent shaped – that protrudes beyond the existing boundaries of the wall it is inserted to. Now, bay windows are more geometric in design and they have a large window panel in the middle with the side windows sitting at an angle to the frame.

Bay windows can add space to your front room via the protrusion sits out over the base of the wall and many bay windows have been designed to accommodate a bench in the centre panel for seating that residents can use to enjoy the view that a bay window provides.

## **Stage bay windows**

The Prima Series sees this beautiful window as one of the leading options for any home's replacement windows package. It is easily combined with any windows combinations to form a cohesive design that demonstrates the flair and creativity of the home's owners. The bay window holds many features that can add to your home's décor – it has a variety of brick molds that come with the window, many different wood interior trim features that will sparkle in your main room, and it comes with an option for an insulated head and seat for those winter nights watching the snow fall. The window comes in the standard white colour – but for those who dare to be different – you can have a myriad of colours to choose from to enhance the look of the exterior of your home.

One of the benefits of the bay window is the fact that it tricks the mind's eye into thinking that the room is bigger than it is. The protrusion of the window in the middle section provides the appearance a larger room – and the appearance can change the ambiance of the room.

The devilish design of the bay window allows more natural light to enter the room without compromising the integrity or the size of the design. With three panels of glass ready to accept sunlight, the reflection of light from the two side panel's tricks the mind's eye, again, into believing that there is more light entering the room than there is.

When you think of a bay window, do you think of the shelf that is created at the base of it for seating or a shelf that you can display china or flowers? Probably not, but that's a benefit that you receive without engaging in new construction to open up the room.

One thing to remember about bay windows, certainly they are a design accent for the front of your home, but you can install them in any room as a

replacement for the existing window that creates all the benefits in the room it is installed in.

If you are upgrading all your windows or you just want to start with the front window and install a bay window, contact us at **Blake Exteriors**. We will provide a free consultation that comes with a no-obligation estimate for your bay window renewal when you call us today at 519.852.7887.

## **Bow windows**

Upgrades and updates for a home are a homeowner's bane, forever is he or she is bombarded by the next big thing to make the home look more presentable or energy efficient or squeeze more size out of your existing configuration. Flyers in the mailbox, calls from telemarketers, or booths set-up at fairs or gatherings are all inundating a homeowner with information that may or may not be useful for their goals of the gentrification of their home that will be cost-effective while enhancing the inner beauty of the property you fell in love with when you saw it.

Some of the goals are laudable; upgrades that require less use of fossil fuels come to mind as a goal worthy of pursuing, but what is the best way to approach the responsibility while improving a home's overall look?

Unseen upgrades like furnaces and water heaters offer a brief respite from high-energy bills, as do smart appliances that can improve the look of a kitchen per se, but don't speak to the character of the house or provide the kind of savings that say replacement windows might.

Whether done in whole or in part – replacement windows can reduce energy consumption while improving the exterior look of a home. Sure, you don't want to replace your home's windows piecemeal because you wouldn't enjoy the maximum savings that new energy-efficient windows provide, but it is a project that is one of the best ways to accomplish your goals.

At **Blake Exteriors**, we can show you the benefits of replacement windows that will reduce your heating and cooling costs while improving the profile of home. Not to mention the boost in value that your home will accrue with new windows. When you talk to one of the windows and doors consultants he will meticulously define your needs and wants and incorporate them into a recommendation that will serve your home's windows needs well. We acquire all our windows and doors from Stage Windows and Doors, a

Canadian company that has been serving consumer's needs for many years.

## **Bow windows**

Bow windows share some similarities to their cousins' bay windows; they expand the size of a room through the protrusion that is the selling point for the window and let in more actual light than flat, conventional windows. But that is where the similarities end and the bow windows difference become relevant. A bow window isn't geometrically shaped – meaning it isn't a flat piece of glass that two other pieces of glass set at an angle to the glass centre. Bow windows contain a number of panels – five usually – and are set so that the window takes a crescent shape to it. Also, different from bay windows is the fact the bow windows will open to allow ventilation – you can have just one panel open or more depending on taste.

## **Stage bow windows**

As per the Prima Series of windows, the bow window comes in the standard white colour but can be modified for the customer to fit the design décor of the home. With the bow windows by Stage, the panels can be four-panel or five-panel windows and they can have moving parts or non-moving windows to suit for taste and application. Depending on the type of glass used in the construction, energy efficiency ratings can vary, but be assured that they are the highest Energy Star and NAFS-11 ratings on the market. Bow windows can create great views for a homeowner and they have the uncanny ability for additional space like a bench or a breakfast nook. The windows are installed on a radius line on outward and they have the distinction of adding another dimension to a home's décor inside and out.

A bow window will add more natural light to any room, provide ventilation that a bay window can't, they have a modern look about them and the clean lines carve out a profile that says 'look at me.' The improved curb appeal that bow windows provide also add dollars to the bottom line through increased value of your property with a bow window making a statement when you approach the home. The bright and airy look that the bow window provides is like catnip to homebuyers as they are looking for these features when purchasing a new home.

When you are ready to make a statement with the windows you choose for you home and a bow window is one of the windows you have in mind, we at **Blake Exteriors** invite you to contact us for a personal consultation. To book your appointment for a free estimate and a no-obligation meeting with one our consultants, call us today at 519.852.7887.

# Vinyl doors

You look at your home and the exterior seems tired or shopworn and you have come to the decision it is time to do something about it. Looking at the front of the house you determine that a full-scale facelift for the front is what is in order to refresh your home and provide some value for the investment. Many self-help articles and videos extol the virtues of home improvements as a way to maximize the investment that is your home. There are other reasons of course to make the necessary changes and they fall along financial lines, and social responsibility to name but two. But the most pressing need for a homeowner is to have a home they can be proud of and that requires time and input. One of the best ways to update the home is through a home renovation project that will provide a lasting impact on the look of the house and will last for a great deal of time based on the investment.

A quick way to update the home's profile and to restore the luster and character that may have faded from your home is with a new vinyl front door for your home. Doors come in all shapes and sizes and are made from a multitude of materials that profess to be the next big thing, but often they fall off of their 'hinges.' The newest door on the market is made of vinyl, and based on testing it is the single biggest revolution in the door industry.

At **Blake Exteriors** we have seen the future and we want to share the vision of what a new replacement door will be for your home that has advantages for a homeowner. With the help of our friends at Stage Windows and Doors, we can show you a vinyl front, side or back door that will help transform your home into an energy-efficient behemoth and the costs are comparable to other products on the market.

## **Vinyl doors**

Like the name indicates, the door is made of vinyl – the exterior and interior sides of the door and who would have thought that pipe material would make its way to the front of our homes. Vinyl is made up of polyvinyl chloride (PVC) and that material developed to replace metal pipes for all things water in our homes. It was developed as a cost-cutting alternative to metal pipes and the flexibility that it provided for installation and lifespan made it a favorite among plumbers – for repair and replacement work -and home builders alike.

## **Vinyl doors, more than a viable alternative**

When you compare vinyl doors to other doors made of different materials, stark differences manifest themselves that demonstrate that vinyl doors are superior products whose time has come.

Made up of high-quality PVC, vinyl doors are made up with some metal products – looks and hardware for installation, but by and large the main pieces of the door are vinyl.

As advances have been made in colour and design for vinyl doors, they can command many different colours rather than the old white or beige colours that were the forerunner for vinyl doors.

In the vinyl doors industry, there is a saying: Vinyl is final. What that means is vinyl doors are virtually maintenance free as they hold their colour, are an easy surface to clean and are impervious to the elements, unlike other products available.

When you look at the comparison for insulation between vinyl doors and the other products available, the first thing that you may notice is that vinyl doors are poor conductors of temperature. That is a good thing because vinyl doors don't radiate cold air in the winter or allow heat infiltration in the summer. This reduces the burden placed on your furnace and air conditioner for heating and cooling and reduces your costs as a result. Another benefit of this situation is the reduction of a home's carbon footprint because your home will expel less in the way of greenhouse gases through a reduction in fossil fuel use and that is an environmental blessing.

The appearance of a vinyl door for a home is certainly something that will enhance a home's profile. You can mix and match different designs to get the door just the way you want it to suit your home's character and charm.

When you update your doors with vinyl door products, the improvement will trigger a financial gain that goes along with the conservation of energy. The improved look that your investment has purchased will increase the equity in your home and the resale value will be higher than a home with different door products. The investment is like a stock dividend, the money you save in energy costs multiplies monthly, and the improved look increases the resale value by reducing investments that the new owner would have made to update the doors to energy-efficient doors.

In comparison to wood doors – that need maintenance regularly to hold their colour, or metal doors that see their colour flake and chip – it only makes sense to purchase vinyl doors for your home.

When you do decide vinyl doors are the thing for your home, we can show the Sunview collection supplied by Stage. The doors are highly rated for energy efficiency by Energy Star, meet building code requirements, need minimal maintenance and are extremely durable.

The Sunview series comes in two options: the Buckingham Eco-Series 1000 Patio Doors series and the Upscale Newcastle Patio Door Series. Each series has options available like colour choices and finish choices, and they are extremely secure. All the doors are don't carry sound like other products in the market, which allows closing out the outside world for peace and quiet.

To see the newest innovations in vinyl door technology, contact us at **Blake Exteriors** for a demonstration. We can devise a colour pattern and design scheme to meet the character of home that will provide curb appeal that sets your home apart from the neighborhood.

For a free consultation and free estimate, make a date with our consultants when you call today at 1.519.852.7887.

# Patio Doors

When we upgrade our homes, we retire what is old and work with a replacement that we hope will improve the look, efficiency or both of the system we are improving on. We upgrade our appliances to get better results for usage – using less energy or using energy more effectively – and the results can be felt in a number of areas. Fewer costs, a reduced carbon footprint through a reduction in energy use that reduces the greenhouse gases our homes emit when we burn fossil fuels. Sure, small savings are an economy of scale when you decide to upgrade on a small scale. But, for larger projects, a greater investment will need to be made, but the returns will be greater, stands to reason. Well, not always, sometimes we invest in our homes with the idea of reduced costs and increased value but it doesn't always turn out that way. Maybe we have been sold a product that doesn't fit the application we had in mind and it is money up in smoke because it didn't reduce costs or increase value.

This happens more than you think when you are purchasing products for your home. If you are in the market for new patio doors, bear in mind that the need is what drives the purchase and often times you can be sold a product that won't suffice your needs. At **Blake Exteriors**, our consultants only listen to the needs of our customers, we hear what they want and how they want it. With that in mind, we devise a plan that includes products from our friends at Stage Windows and Doors. Stage Windows and Doors has equipped their manufacturing facility with all the key component fabrication processes needed to make the most energy-efficient and reliable windows on the market. With everything under one roof—from the insulated glass unit fabrication to PVC profile bending to painting—all quality and service levels can be managed seamlessly and

proficiently and supplying quality products at a fair price. As a Canadian company, they are the vanguard of technology development that now lead the industry in excellent innovations in the windows and doors market.

## **Patio doors**

Essentially, vinyl patio doors are large windows that are on rollers that open. Patio doors have all the bells and whistles that vinyl windows have, but they let in more natural light and have the same energy efficient ratings as vinyl windows. Vinyl patio doors can come in double or triple pane options and can be coated with low emissivity metal that will protect you from harmful UV rays that will shine through non-coated patio doors.

## **Stage patio doors**

Our friends at Stage have two different patio door styles for potential customers to choose from that will be the envy of the neighborhood.

1. Newcastle Patio Door Series comes in a two-panel or four-panel design that is energy efficient but comes with subtle differences. The two-panel patio door will have one panel that slides on heavy gauge steel, whisper quiet rollers that will open the length of the second panel. The four-panel patio door will see the centre two panels open the width of the far two panels that allow for a wide opening to let fresh air in. Both models come with a heavy-duty screen to keep the bugs out and hold up well in strong breezes and they won't rip or tear when exposed to strong winds. The Newcastle Patio Doors Series is a high-performance patio door that comes with many add-ons for decorative value and it is the pride of the Sunview line. The door materials are high-grade materials that offer performance and reliability that is second to none when compared with the competitors. The best part of the door is the durability that it offers and the state-of-art vinyl material that the door is made up of is incomparable for patio doors. The door comes in the standard white colour and it matches the exterior colour scheme or design with a stately contemporary value that is in demand by homeowners who upgrade their patio doors.

### **Standard Features**

- Elegant heavy-duty screen
- Pocket covers on interior, exterior jambs, and sill
- Triple point stainless steel locking system
- Precision adjustable rollers
- Assembled (specify handing)

### **Frame & Panel**

- Multi-chamber frame and sill
- All vinyl 4 7/8", 6 1/8" and 6 7/8" frame and sill
- Welded 45° frame and sash
- 2"x 5" vinyl steel reinforced welded sash
- Double weather strip on meeting rails

2. The Buckingham Eco-Series 1000 Patio Doors series is the highly-regard vinyl patio door that provides a great return on investment. It comes in a two-panel design that can be opened the entire width of the fixed door and it provides excellent natural light for any room you install it in. In the Sunrise category of patio doors, it comes with a heavy-duty screen and it is strong enough to handle high winds or flying insects with equal protection for the interior of the house. As a vinyl product, it will not rust, blister or pit due to exposure for a long period of time and has the distinction of durability that will spell a long life for this model of the patio door. The Buckingham 1000 is a value door – and that means it is economical and easy to install. Also, made of vinyl it is easy to clean and holds its' colour for a great deal of time. The model comes in a basic white colour that can see it mixed and matched with designs that it is inserted to.

## ECO Frame

- 5 7/8" mechanically fastened vinyl-clad ECO frame
- Components easily installed and replaceable
- 3 weather seals
- Anodized screen track /stainless steel roller track
- 8 degree sill slope for optimal drainage

## Durable Sash

- Reinforced steel withstands higher wind loads
- Double perimeter seal for superior air-tightness
- Doors are easily and completely reversible
- Adjustable tandem ball-bearing rollers
- 1" sealed units for optimal thermal performance

## Optional

### Optional Internal Mini-Blinds

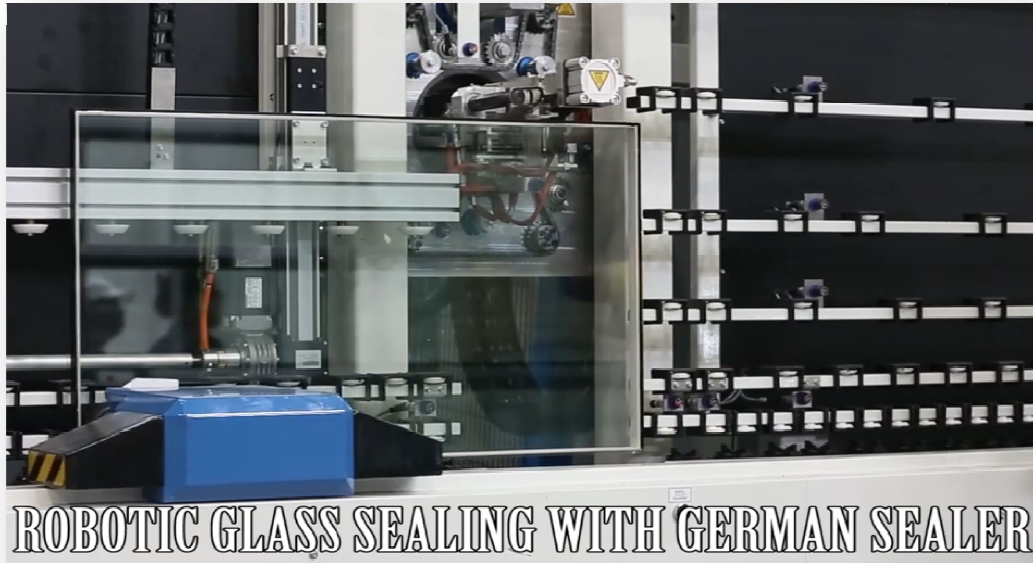

- Fingertip operation
- No external cords
- No dusting
- Low-E glass
- Only available for 59½ x 79½ and 71½ x 79½ doors

Maximum visibility to complete privacy at the tip of a finger. The lever raises, lowers or tilts the blinds sealed between the insulated glass to ensure maintenance-free operation.

New patio doors are a great way to spruce up your patio and with doors supplied by Stage, and you know you are getting quality for the investment you are making in your patio.

Contact us at **Blake Exteriors** to discuss your patio door needs and we can create options that will improve the quality of life when you use your patio. For a no-obligation design conference that comes with a free estimate, call us today at 1.519.852.7887.

# Stage Hardware & Efficiency

All glass packages are produced with German hot-melt product testing to provide the longest-gas retention rate in the industry.

## Low-E Coating

Interior Low-E options available with both Energy-gain and Sun-shield packages. Energy-gain and Sun-shield packages to meet customers' needs; from energy gain to high R-value and UV-blocking features. Both packages have multiple combinations of Low-E glasses to achieve different levels of performance.

### Energy-gain

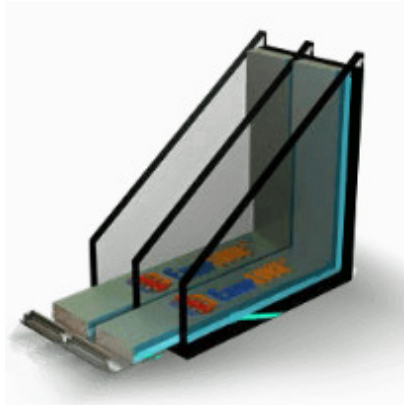

Energy-gain packages are designed to take advantage of the free heat from the sun.

### Sun-shield

Sun-shield packages are designed to block unwanted heat and UV rays from the sun and increase R-values.

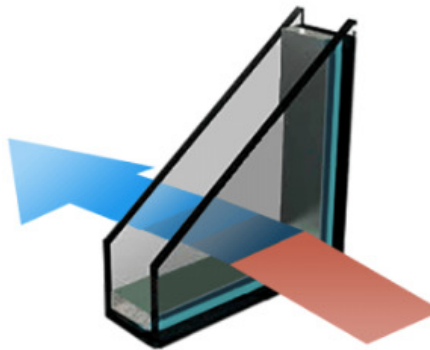

## Double & Triple Glazing

Traditional 7/8" double glazing options, can accommodate 1-1/4" for all sliders and hung windows.

Triple glass packages will qualify for high energy-rating standards. The 1-3/8" and 1-1/4" triple glazing options will also eliminate the need for expensive Krypton gas and/or unnecessary extra Low-E glass that could reduce the IG life expectancy due to excessive heat buildup.

## Argon and Krypton Gas

Triple pane technology is designed to reduce the window's heat conductivity and stop the cold from getting inside the house. To achieve this, Argon or Krypton gases are utilized to fill the space between the panes. Both gases conduct up to 50% less heat than air, and when coupled with triple pane construction you get added protection against heat loss, condensation and cold weather. Less heat loss translates directly into more energy cost savings for you.

**NAFS 11**

Stage Windows and Doors are tested according to the NAFS 11 standards. The ratings achieved put Stage Windows and Doors among a **very small elite group of manufacturers** of Quality and High Performing products. NAFS is the North American Fenestration Standard (officially known as AAMA/WDMA/CSA 101/I.S.2/A440) that is used in Canada and the United States. NAFS 11 is a new fenestration standard to test and evaluate the performance of windows, doors.

# Privacy Glass

Stage glass is available in a multitude of designs and each can be tinted to gray or bronze to complement the interior, or ordered frosted to add privacy where desired.

Super Grey

Silvet

Glue Chip

Frosted

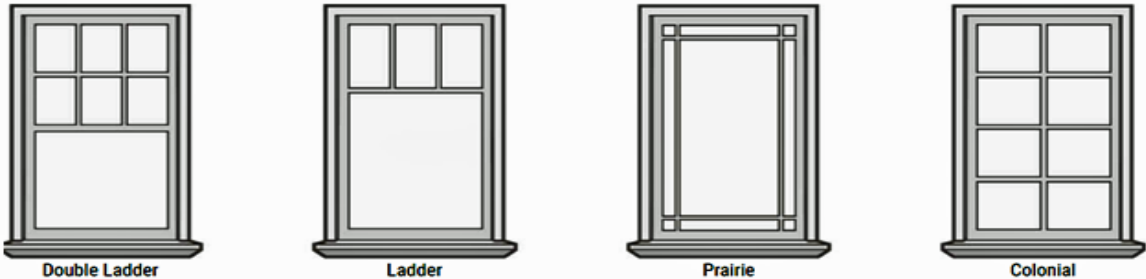

Delta Frosted

Chinchilla

Acid Edge

# Features & Options

Double Ladder

Ladder

Prairie

Colonial

When talking about windows, grills are bars that divide a window into smaller decorative panes. Matching the architectural design of your house has never been easier. Interior grills are installed between the glass panes and require no maintenance, do not accumulate dust and leave the window surface smooth for easy cleaning.

# Colours

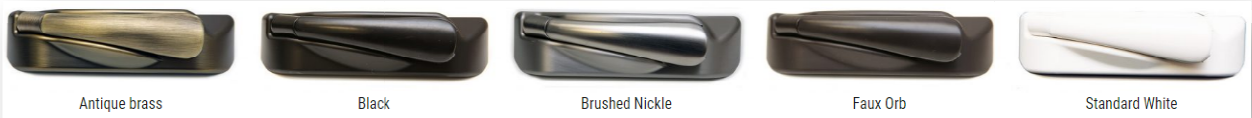

Stage Selection of exterior stocked standard colours, paint-to-order, and interior colour matching program for operable casement, fixed casement, awning, picture.

- 12 standard colours
- 2 VINABOND stain finishes available. (Inside/Outside)  
Custom colour matching
- Paint/Stain Inside extensions and casings

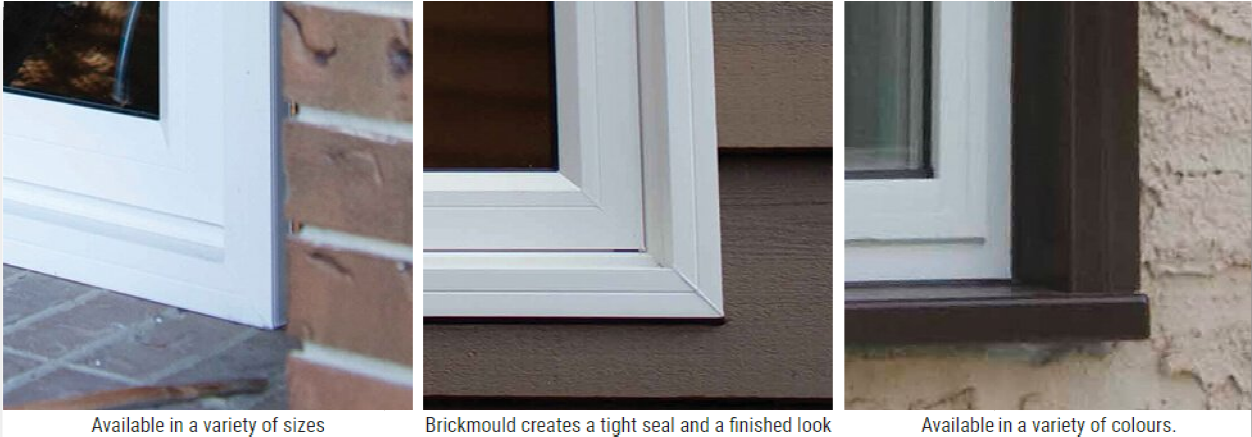

All exterior paint and stain finishes come with a 15 year warranty. Paint *is* a water-based system that meets AAMA standard 613-02:

# Hardware Finishes

# Exterior Finishes

Brickmolds are an important part of window replacement. A brickmould is a strip of vinyl that is used to close the small gap between the wall and the frame of the opening, providing a seal against both water and air infiltration. Vinyl brickmoulds are lightweight, durable and easy to work with. They create a traditional look, and do not need to be painted. They come in a variety of colours to easily match the colour scheme of your home.

# Interior Finishes

## Jamb Extensions

Offered in a variety of sizes, our vinyl jamb extensions perfectly complement your vinyl window.

- 100% lead-free durable virgin PVC
- 100% maintenance free
- Moldable for windows of various shapes

## Snap-on Casing

Offered in a variety of sizes, our vinyl snap-on casing perfectly complements your vinyl window, accentuated with stylish rosettes or mitered corner casings.

- 100% lead-free durable virgin PVC
- 100% maintenance free
- Mouldable for windows of various shapes
